Mobile Field Interview

Continuous field intelligence and analysis, at your fingertips

Haystax
TECHNOLOGY
Security Analytics **Redefined**

Based on Haystax Technology's Constellation Analytics Platform, our Mobile Field Interview application is designed to digitize and streamline the field interview (FI) process from end to end, eliminating the need for cumbersome hand-written FI notecards. FI data can be rapidly accessed to identify emerging threats, patterns and trends, boosting analytical capabilities while saving thousands of labor hours.
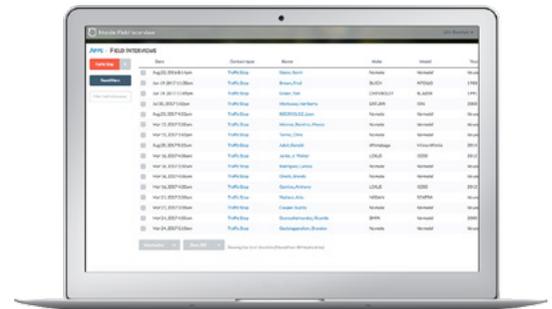

Actionable intel from the field

The Mobile FI app replaces conventional field interview cards, which are challenging to fill out, submit, file, store and retrieve. With this app on their smartphones, law enforcement officers can enter data collected from informal contacts during routine patrols, which can be immediately accessed by other system users. Mobile FI captures information on people — such as clothing, physical features and unusual markings like tattoos and scars, plus routine data like birth dates and home addresses — as well as vehicle makes, models, years, colors and license plate numbers. Officers can also attach geo-located photos, which can be valuable for background related to an incident or to track the movement of specific people or vehicles over time
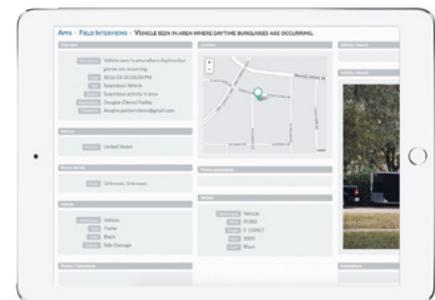

Centralized data fusion

Far more than just a simple data-entry app, Mobile FI is fully integrated into our cloud-based Constellation platform so department personnel can cross-reference new FI alerts with past encounters, suspicious vehicle and activity reports and other related events. Intuitive searching, filtering and sorting from this central repository can be done rapidly, providing the earliest indications of potential criminal or terrorist activity. For example, departments can quickly ascertain links and common activity patterns between five individual members of the same street gang, or a suspicious vehicle that is observed in three separate locations. Each entry can be edited or updated by any authorized user as new information becomes available, and customized summary reports can be generated on a regular basis.
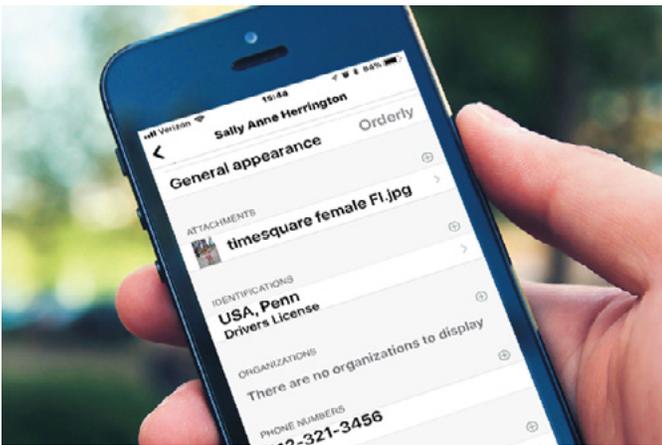

Technological power

Law enforcement agencies can take full advantage of the latest cloud, data analytics and mobile device technologies embedded in Mobile FI. Officers simply enter relevant information (many of the fields will auto-populate) and click 'Submit,' whereupon the entry is instantaneously synchronized and visible across the department. Because the system automatically geo-tags and time-stamps each FI report, the exact locations and times of all entries are recorded. Auto-filled data fields and talk-to-text mean that erroneous data due to illegible handwriting or rekeying mistakes also is eliminated. And off-line capabilities allow the app to function even without network connectivity.

Customer Success Stories

Replacing paper-based FI reports with digital alerts and analysis

Haystax TECHNOLOGY
Security Analytics **Redefined**

US law enforcement agencies use the Constellation Mobile FI app to streamline their field interview processes and improve intelligence sharing and reporting. Field officers now submit their reports digitally, on individuals caught trespassing, loitering or otherwise acting suspiciously, or on vehicle-related issues like broken tail-lights or parking for excessive periods of time. And because Constellation is cloud-based, commanders, investigators and other authorized users can then securely access all these individual FI records — plus aggregated reports and map-based data — anywhere at any time on their smartphones, tablets, laptops or desktops. The net result for law enforcement officials, both in the field and in command centers, is improved domain awareness that would be nearly impossible relying on paper-based and non-mobile systems. This enhanced awareness helps police departments investigate and make quicker connections between events to stay ahead of high-risk situations.

GET IT ON Google Play

Download on the App Store

Key Features

24/7 intelligence
Instant access to FI information, on any device

Geo-location
Built-in blue-force tracking and precise event location

Security
Complete protection of data with encrypted storage and transmission

Key Benefits

Deeper insights
Empowers commanders with actionable analysis

Mission ready
Secure cloud-deployed application

Cost effective
Rapid deployment and user training
