

School Safety

Detect campus threats sooner and respond faster

Complete awareness for school districts and their partner agencies

The Haystax School Safety Center merges critical incident and school facility information into a single online system – available any time, any place, on any device – ensuring

that all school safety stakeholders have a shared common operational picture of their security environment for effective protection of students, staff and facilities.

Contextual monitoring of threats and risks

Visualize and keep up with emerging threat activity in and around schools using news, public safety, social media and other digital feeds. The Haystax system combines 'big data' analytics and other risk-based processing to filter out all but the highest priority threats. Search concepts can be tailored to each school community's requirements, and feeds and other data are displayed on a single screen for clearer visualization.

Incident reporting and event tracking

Maintain real-time 'situational awareness' with live reporting of emerging incidents from multiple sources. Mobile apps instantly report bullying, drug and gang activity, suspicious packages and much more. Social media posts and news/RSS feeds can be logged as incidents, while incident alerts automatically appear at their exact locations on a map. All known events such as school fairs and sporting events can be entered in advance for additional contextual awareness.

School safety data management

Collect and manage critical information about every school in a district or state, and build a detailed custom safety profile for each one. Conduct in-depth safety assessments, or do a quick self assessment. Import emergency plans, floor plans, contact information, photos and more. Precisely geo-locate each school on a map. Regular reports can be generated from the asset, assessment, incident and event data and shared with school leadership and the community.

Customer Success Stories

Florida protects students with online school safety assessments

The Florida Department of Education (FLDOE) uses the Haystax system to catalog all school assets in the state, and to perform online school safety assessments in order to identify the highest-priority safety issues facing the schools, as well as listing safety controls already in place. The system also provides all critical information needed in case of an emergency response at a school, such as floor plans, site maps, emergency plans and photos and contact information for key personnel. Florida is the first state in the US with an authoritative and continuously updated online repository of school data. The system enables FLDOE to share assessment best practices to ensure uniform standards across the state, and gives school district superintendents a detailed understanding of their most critical vulnerabilities and threats.

Key Benefits

Intuitive visualizations
See all security data in context, on a map or in a timeline

Automated reporting
Share critical information instantly

Highly secure
Enterprise-grade security for web and mobile users

Cost-effective
Rapid deployment and user training, and lower operating costs
