

# Law Enforcement

Full domain awareness and incident management – in the command center or the palm of your hand

## Monitor, report, alert and respond to incidents from a single unified environment

Police chiefs, commanders and officers rely on Haystax applications every day for an array of tasks from routine intelligence and operations to major incident responses.

## Respond with confidence

Be fully prepared for any crime or emergency by having a continuously updated picture of incidents and emerging threats, plus precisely located views of important facilities, vehicles and people. Integrate your existing data like CAD calls, video and ALPR hits. Conduct threat and vulnerability assessments in advance, and maintain in one place all floor plans, emergency plans, photos and key contact information. The Haystax law enforcement solution delivers the ground intelligence you need, when you need it.

## Fully control your entire chain of command

Everyone from leadership to tactical teams has visibility into the system. Commanders can take their ops center with them through our mobile app, getting an instant view of their area of responsibility even while in the field. Officers and intel teams act as sensors by submitting incident alerts and status updates from their mobile devices, and ops center staff can see their exact locations through our blue-force tracking capabilities. The responsive command and control you've always wanted is available today.

## Expand your digital intelligence network

Instant data availability is key in a crisis. So why rely on radios, paper maps and field interview cards for situational awareness when you can have all of that data digitally at your fingertips? Combine suspicious activity and field interview reports, threatening social media feeds, sensor data, scheduled events, crime stats, traffic and weather data and much more on your own custom map or timeline feed, filtered so that you see all the key signals – with none of the noise.

# Customer Success Stories

## Indianapolis maintains operational awareness and rapid response capabilities 24/7

The Indianapolis Department of Homeland Security started using the Haystax platform in February 2012 as a security monitoring tool and incident response environment for Super Bowl XLVI. Since that successful deployment, Indy DHS has expanded its use of the Haystax system for a variety of additional special events such as the annual Indianapolis 500 auto race as well as routine patrol operations and critical incident responses. The Indy deployment demonstrates the power of having a detailed asset catalog pre-loaded into the system and ready for use by SWAT and other teams during crimes and other emergencies. In addition, the department has shared emergency dispatch information with and completed safety assessments for numerous schools in a multi-county area surrounding Indianapolis. This has provided the department with greater visibility into serious threats and vulnerabilities at schools while providing school principals with greater awareness of crimes taking place in areas surrounding their campuses. The Indy Haystax deployment showcases multi-jurisdictional information sharing, major event management and rapid incident response at their most effective.

### Key Benefits

#### Domain awareness

See crime data in context, on a map or in a timeline

#### Rapid insights

Empowers commanders with actionable information

#### Mobile

Field teams become sensors, for improved ground intelligence

#### Cost-effective

Rapid deployment and user training, and lower operating costs
