

# Haystax Mobile Field Interview

Eliminate paperwork, auto-populate existing data, view related cases and save thousands of hours

The Haystax Mobile Field Interview application is much more than a mobile data entry form. It is designed to streamline the critical field interview process by completely eliminating the need for paper, auto-populating fields and finding related cases in real-time. The information is managed in a central repository and can be used to monitor, detect and identify patterns and trends.

**Seamless on-line/off-line capabilities enable the app to work with or without network connectivity. Key features include:**

- **Data entry forms** capture GPS location and can sync data back to server when user is back online.
- **Interview images are stored in secure database** and not linked to any other application.

**Haystax mobile applications are built on our industry-leading Constellation Analytics Platform™. Key features include:**

- **Customer-specific configuration** code allows for one-step user install while hiding all the complexity.
- **Data security** is architected to meet the highest level of government security.

**Pre-populate data, automatically find related cases and detect patterns and trends across all records. Key features include:**

- **Rapid search** using one or more related fields.
- **Single-screen interface** and pre-populated dropdown menus make it possible to complete interview process with one hand.

## Why Mobile FI

Quick filters enable rapid information search

Automatically geo-locates event and user

Find and view related case information with a single click

Complete separation of data with encrypted storage and transmission

Seamless online-offline modes enable use anywhere, anytime

Protected by role-based access control at all times

## Why Haystax

### Cost effective:

Lower initial and ongoing operating costs

### Mission ready:

Secure cloud-deployed packaged applications

### Rapid insights:

Empower first-responders with actionable information

### Improved capabilities:

Enhances existing field interview systems and processes
